Re: Construction Completion and Placed into Service Certification

\_\_\_\_\_ (service address)

\_\_\_\_\_ (service block and lot)

\_\_\_\_\_ (municipality)

To: SMCMUA Engineering Department:

In support of the development application for the above referenced project, our office has observed the construction of the water main at the referenced project. I certify that the water utility has been built and/or 'placed into service' and was completed in conformance with NJAC 7:10-11.10 and in accordance with the approved plans and other supporting documentation.

I understand that 'placed into service' means that the water mains or other permitted infrastructure changes are delivering water to all consumers, except to the extent that the remaining number of realty improvements not being serviced is below the threshold for needing an individual permit from the NJDEP Bureau of Water System Engineering (i.e. less than 30 realty improvement or 12,000 gpd of non-residential demand). I am familiar with NJDEP form BWSE-PA10DET.

The water main construction (including all backfill and testing) was completed on: \_\_\_\_\_.

The facility was placed into service on: \_\_\_\_\_.

We acknowledge that SMCMUA will utilize this information for tracking completed developments for their NJDEP Master Permit.
